Editorials

- 597 Moedas's legacy – and what Europe must do next**
The next EU research chief must act to prevent budget cuts
- 597 Brexit promises are premature**
Why offers of new UK science funding might be unaffordable
- 598 Open data could save more tigers**
India must let researchers access raw data on this threatened species

World view

- 599 Contract cheating will erode trust in science**
Focus on educational systems, not individuals, to combat academic dishonesty
Tracey Bretag

Research highlights

- 600 Record-breaking lightning / Giant toad's cunning disguise / The brain's greatest hits / Loudmouthed birds / Homing in on HIV / Quantum knot**

News in brief

- 602 Fresh push for 'failed' drug / Trump revives science council / Australian call to boost conservation / Canada's climate lawsuit / AI outplays video gamers**

News in focus

- 605 The struggle to access Africa's historical climate data**
- 606 Canadian scientists relieved by Trudeau's election win**
- 607 Clash over open data leaves Venice digital-history project in limbo**
- 608 Racial bias in US health-care algorithm affects millions**
- 609 Furore over 'gay gene' app highlights concerns over DNA-interpretation tools**

Features

- 612 Tiger trouble**
Researchers question India's long-term plans to protect its tigers
- 618 A complex inheritance**
The promise and peril of finding links between genes and complex social traits

Books & arts

- 622 Double deception in the asylum?**

Robust evidence of insect declines
Long-term standardized monitoring reveals the scale of biodiversity losses
William E Kunin
See Article p.671

ON THE COVER

The cover shows an example of the 'entangled bank' of interacting species that Darwin described in the conclusion of *On the Origin of Species*. In this week's issue, **James Leebens-Mack, Gane Ka-Shu Wong** and colleagues from the **One Thousand Plant Transcriptomes Initiative** report vegetative transcriptomes of 1,124 plant species and use these data to infer the evolutionary relationships between species and to plot the timing of genomic changes and diversification events. They find that large expansions of gene families preceded the origins of land plants and vascular plants, whereas whole-genome duplications occurred repeatedly throughout the evolution of flowering plants and ferns. Cover image: Alaina R. Petlewski (Boyce Thompson Institute). **Page 679**

CORRECTIONS & CLARIFICATIONS

Correction

Stem cells 2 go

This feature (*Nature* **573**, 482–485; 2019) stated that an anonymous patient received a treatment called HeartSheet, developed by Yoshiki Sawa. The patient was told he was receiving a sheet of muscle cells from his thigh, which matches the description of HeartSheet, and was under the impression that Sawa was administering HeartSheet. Terumo, the company that produces HeartSheet, says that the patient did not receive HeartSheet but instead received an experimental treatment. Sawa has not returned *Nature's* numerous requests for information or comment.
