Sockeye salmon gather to spawn in a stream near Alaska's Bristol Bay. Opponents of a proposed gold and copper mine fear it could damage a world-class salmon fishery.

SPECIAL SECTION

Genotype to phenotype

INTRODUCTION

1394 The manifestation of the genome

REVIEWS

1396 Deconstructing the sources of genotype-phenotype associations in humans *A. I. Young et al.*

1401 Mapping human cell phenotypes to genotypes with single-cell genomics *J. G. Camp et al.*

1405 Microbiomes as sources of emergent host phenotypes *J. B. Lynch and E. Y. Hsiao*

1409 Translational genomics and precision medicine: Moving from the lab to the clinic *E. Zeggini et al.*

ON THE COVER

Genes present a blueprint directing molecular machinery to create an adult human, but phenotype also depends on environmental factors. Shown

are genetically distinct individuals (highlighted) shadowed by other phenotypes they may have displayed under different developmental conditions. This special issue examines the complexity of translating genotype to phenotype, including how varied environments may affect the developing phenotype. See page 1394.
