

# Journal of Systems Engineering and Electronics

Volume 27 Number 3

June 2016

## CONTENTS

### ELECTRONICS TECHNOLOGY

- 501 Joint DOA and polarization estimation for unequal power sources based on reconstructed noise subspace**

Yong Han, Qingyuan Fang, Fenggang Yan, Ming Jin, and Xiaolin Qiao

- 514 Denoising of X-ray pulsar observed profile using biorthogonal lifting wavelet transform**

Mengfan Xue, Xiaoping Li, Yanming Liu, Haiyan Fang, Haifeng Sun, and Lirong Shen

- 524 Deep space multi-file delivery protocol based on LT codes**

Ruyan Wang, Hua Liang, Hui Zhao, and Gaofeng Fang

- 531 Cells grouping scheme against pilot contamination in large scale antennas system**

Zhichao Zhou, Yang Xiao, and Dong Wang

- 541 Improved iterative convergence method in Q-ary LDPC coded high order PR-CPM**

Danfeng Zhao, Yanbo Sun, and Rui Xue

- 549 Collaborative beamforming based on directional perturbation using one bit feedback**

Haifeng Yang, Ning Ding, Zhi Zheng, Shuisheng Lin, Zhongpei Zhang, and Guangjun Li

- 555 DOA estimation via sparse recovering from the smoothed covariance vector**

Jingjing Cai, Dan Bao, and Peng Li

### DEFENCE ELECTRONICS TECHNOLOGY

- 562 Impacts of space-time-frequency synchronization errors on wideband target echo characteristics of bistatic/multistatic radar**

Minghai Pan, Qinghua Han, Shufeng Gong, Weijun Long, and Haitao Wei

- 574 Parameter estimation of maneuvering targets in OTHR based on sparse time-frequency representation**

Jinfeng Hu, Xuan He, Wange Li, Hui Ai, Huiyong Li, and Jūlan Xie

- 581 Iterative physical optics model for electromagnetic scattering and Doppler analysis**

Changze Li, Chuangming Tong, Yan Bai, and Lihui Qi

### SYSTEMS ENGINEERING

- 590 Service composition based on discrete particle swarm optimization in military organization cloud cooperation**

An Zhang, Haiyang Sun, Zhili Tang, and Yuan Yuan

**602 Intercepts allocation for layered defense**

Longyue Li, Fuxian Liu, Guangzheng Long, Pengsong Guo, and Yingying Mei

**612 Cooperative path planning for multi-AUV in time-varying ocean flows**

Mingyong Liu, Baogui Xu, and Xingguang Peng

**619 Distributed cooperative task planning algorithm for multiple satellites in delayed communication environment**

Chong Wang, Jinhui Tang, Xiaohang Cheng, Yingchen Liu, and Changchun Wang

**634 Systems engineering optimization of Omid-2 in the conceptual design phase**

H. Shahrabi and Seid H. Pourtakdoust

**CONTROL THEORY AND APPLICATION**

**649 Stabilization of linear time-varying systems with state and input constraints using convex optimization**

Feng Tan, Mingzhe Hou, and Guangren Duan

**656 Robust adaptive control for dynamic systems with mixed uncertainties**

Jiaoru Huang, Fucui Qian, Guo Xie, and Hengzhan Yang

**664 Fuzzy sliding mode control guidance law with terminal impact angle and acceleration constraints**

Qingchun Li, Wensheng Zhang, Gang Han, and Yuan Xie

**SOFTWARE ALGORITHM AND SIMULATION**

**680 Reconstruction and transmission of astronomical image based on compressed sensing**

Xiaoping Shi and Jie Zhang

**691 Image matching algorithm based on SIFT using color and exposure information**

Yan Zhao, Yuwei Zhai, Eric Dubois, and Shigang Wang

**700 Posterior probability calculation procedure for recognition rate comparison**

Jun He and Qiang Fu

**712 Mobile-agent-based energy-efficient scheduling with dynamic channel acquisition in mobile cloud computing**

Xing Liu, Chaowei Yuan, Zhen Yang, and Zengping Zhang

**721 Adaptive luminance adjustment and neighborhood spreading strength information based view synthesis**

Zhizhong Fu, Xue Wang, Yuan Li, Xiaohui Yang, and Jin Xu

**RELIABILITY**

**730 Combined forecast method of HMM and LS-SVM about electronic equipment state based on MAGA**

Jianzhong Zhao, Jianqiu Deng, Wen Ye, and Xiaofeng Lü
