

CONTENTS

ELECTRONICS TECHNOLOGY

- 215 Resource-constrained maximum network throughput on space networks**
Yanling Xing, Ning Ge, and Youzheng Wang
- 224 Transmission upper limit of band-pass double-layer FSS and method of transmission performance improvement**
Minjie Huang and Zhijun Meng
- 232 Low-complexity fractional phase estimation for totally blind channel estimation**
Xu Wang, Tao Yang, and Bo Hu
- 241 Pressure and velocity cross-spectrum of normal modes in low-frequency acoustic vector field of shallow water and its application**
Yun Yu, Qing Ling, and Jiang Xu

DEFENCE ELECTRONICS TECHNOLOGY

- 250 Simulation of two-dimensional ISAR decoys on a moving platform**
Xiaoyi Pan, Wei Wang, Qixiang Fu, Dejun Feng, and Guoyu Wang
- 258 Security information factor based airborne radar RF stealth**
Fei Wang, Mathini Sellathurai, Weigang Liu, and Jiangjiang Zhou
- 267 Target detection for low angle radar based on multi-frequency order-statistics**
Yunhe Cao, Shenghua Wang, Yu Wang, and Shenghua Zhou
- 274 High resolution wide swath revisit synthetic aperture radar imaging mode and algorithm**
Weihua Zuo, Yiming Pi, and Rui Min

SYSTEMS ENGINEERING

- 282 Learning Bayesian network structure with immune algorithm**
Zhiqiang Cai, Shubin Si, Shudong Sun, and Hongyan Dui
- 292 A framework for equipment systems-of-systems effectiveness evaluation using parallel experiments approach**
Zilong Cheng, Li Fan, and Yulin Zhang

301 Adaptive evolvement of information age C⁴ISR structure

Yushi Lan, Kebo Deng, Shaojie Mao, Heng Wang, Kan Yi, and Ming Lei

317 Hybridizing grey wolf optimization with differential evolution for global optimization and test scheduling for 3D stacked SoC

Aijun Zhu, Chuanpei Xu, Zhi Li, Jun Wu, and Zhenbing Liu

329 Solution to multiple attribute group decision making problems with two decision makers

Fangwei Zhang, Wei Wang, and Xuedong Hua

CONTROL THEORY AND APPLICATION

334 Modified super twisting controller for servicing to uncontrolled spacecraft

Binglong Chen and Yunhai Geng

346 Time-asynchrony identification between inertial sensors in SIMU

Gongmin Yan, Xi Sun, Jun Weng, Qi Zhou, and Yongyuan Qin

353 Design of a robust guidance law via active disturbance rejection control

Yanbo Yuan and Ke Zhang

SOFTWARE ALGORITHM AND SIMULATION

359 Dark channel prior based blurred image restoration method using total variation and morphology

Yibing Li, Qiang Fu, Fang Ye, and Hayaru Shouno

367 Analysis of system trustworthiness based on information flow noninterference theory

Xiangying Kong, Yanhui Chen, and Yi Zhuang

381 Evidential method to identify influential nodes in complex networks

Hongming Mo, Cai Gao, and Yong Deng

388 Archimedean copula estimation of distribution algorithm based on artificial bee colony algorithm

Haidong Xu, Mingyan Jiang, and Kun Xu

RELIABILITY

397 Accelerated proportional degradation hazards-odds model in accelerated degradation test

Tingting Huang and Zhizhong Li

407 Neural network based approach for time to crash prediction to cope with software aging

Moona Yakhchi, Javier Alonso, Mahdi Fazeli, Amir Akhavan Bitaraf, and Ahmad Patooghy

415 Diagnosabilities of exchanged hypercube networks under the pessimistic one-step diagnosis strategy

Jiarong Liang, Ying Huang, and Liangcheng Ye
