

CONTENTS

ELECTRONICS TECHNOLOGY

- 1 **Quaternion based joint DOA and polarization parameters estimation with stretched three-component electromagnetic vector sensor array**
Jichao Zhao and Haihong Tao
- 10 **Dimensions estimation for cone-cylinder target based on sliding-type scatterers analysis**
Yuling Liu, Xizhang Wei, Bo Peng, and Yongshun Ling
- 19 **Efficient recovery of group-sparse signals with truncated and reweighted $l_{2,1}$ -regularization**
Yan Zhang, Jichang Guo, and Xianguo Li
- 27 **Fractal detector design and application in maritime target detection**
Xinglin Shen, Zhiyong Song, Yongfeng Zhu, and Qiang Fu
- 36 **Method for compensating translational motion of rotationally symmetric target based on local symmetry cancellation**
Jingqing Li, Sisan He, Cunjian Feng, and Yizhe Wang

DEFENCE ELECTRONICS TECHNOLOGY

- 40 **Motion compensation algorithm in narrowband imaging for mid-course targets**
Xizhang Wei, Zhen Liu, Xiaofeng Ding, and Bo Peng
- 51 **Entropy-based multipath detection model for MIMO radar**
Junpeng Shi, Guoping Hu, and Hao Zhou
- 58 **Texture invariant estimation of equivalent number of looks based on log-cumulants in polarimetric radar imagery**
Xianghui Yuan and Tao Liu

SYSTEMS ENGINEERING

- 67 **Role-based approaches for operational task-resource flexible matching model and algorithm**
Zhigang Zou, Wangfang Che, Fuling Mu, Yiqian Chao, and Bo Zhang
- 81 **Construction of composite indicator system based on simulation data mining**
Jianfei Ding, Guangya Si, Baoqiang Li, Jingyu Yang, and Yu Zhang

- 88 **Double weight determination method for experts of complex multi-attribute large-group decision-making in interval-valued intuitionistic fuzzy environment**

Bingsheng Liu, Sijia Guo, Kaijing Yan, Ling Li, and Xueqing Wang

- 97 **New method for hybrid multiple attribute decision-making problems with decision maker's aspiration level**

Bengang Gong, Dandan Guo, and Wenqi Jiang

CONTROL THEORY AND APPLICATION

- 103 **Robust entry guidance using multi-segment linear pseudospectral model predictive control**

Liang Yang, Wanchun Chen, Xiaoming Liu, and Hao Zhou

- 126 **Sensor fault-tolerant observer applied in UAV anti-skid braking control under control input constraint**

Hui Sun, Jianguo Yan, Yaohong Qu, and Jie Ren

- 137 **Optimization of projectile state and trajectory of reentry body considering attainment of carrying aircraft**

Changsheng Gao, Chunwang Jiang, and Wuxing Jing

- 145 **Terminal sliding mode control based on super-twisting algorithm**

Zhanshan Zhao, Hongru Gu, Jing Zhang, and Gang Ding

SOFTWARE ALGORITHM AND SIMULATION

- 151 **Unsupervised feature selection based on Markov blanket and particle swarm optimization**

Yintong Wang, Jiandong Wang, Hao Liao, and Haiyan Chen

- 162 **Convolutional neural networks for time series classification**

Bendong Zhao, Huanzhang Lu, Shangfeng Chen, Junliang Liu, and Dongya Wu

- 170 **Efficient privacy-preserving classification construction model with differential privacy technology**

Lin Zhang, Yan Liu, Ruchuan Wang, Xiong Fu, and Qiaomin Lin

RELIABILITY

- 179 **Reliability indexes for multi-AUV cooperative systems**

Qingwei Liang, Tianyuan Sun, and Dongdong Wang

- 187 **Fully Bayesian reliability assessment of multi-state systems with overlapping data**

Zhipeng Hao, Jianbin Guo, and Shengkui Zeng
