

CONTENTS

ELECTRONICS TECHNOLOGY

- 721 Blind channel estimation for multiple antenna OFDM system subject to unknown carrier frequency offset**
Xiaofei Zhang and Dazhuan Xu
- 728 Optimized LDPC differential-encoded 16QAM scheme for high-speed transmission systems**
Zhanji Wu, Xiang Gao, and Zhiyu Xiao
- 735 Tracking performance of large margin classifier in automatic modulation classification with a software radio environment**
Hamidreza Hosseinzadeh
- 742 Method of neural network modulation recognition based on clustering and Polak-Ribiere algorithm**
Faquan Yang, Zan Li, Hongyan Li, Haiyan Huang, and Zhongxian Pan
- 748 Blind reconstruction of convolutional code based on segmented Walsh-Hadamard transform**
Fenghua Wang, Hui Xie, and Zhitao Huang
- 755 Modified MUSIC estimation for correlated signals with compressive sampling arrays**
Yan Jing, Naizhang Feng, and Yi Shen
- 760 High-resolution swath bathymetry using MIMO sonar system**
Xionghou Liu, Chao Sun, Jie Zhuo, Feng Yi, and Zongwei Liu
- 769 Frequency domain polarization weighted ESPRIT method for bearing angle**
Wei Liu, Shengchun Piao, Junyuan Guo, Qingxin Meng, and Hanhao Zhu

DEFENCE ELECTRONICS TECHNOLOGY

- 776 Infrared modeling and imaging simulation of midcourse ballistic targets based on strap-down platform**
Changzhen Qiu, Zhiyong Zhang, Huanzhang Lu, and Kaifeng Zhang
- 786 New analytical imaging algorithm for general case airborne bistatic SAR**
Jianyun Zhang, Jinhe Ran, and Yongjun Wu

- 794 Real-domain GMUSIC algorithm based on unitary-transform for low-angle estimation**
Zheng Liu, Yuanyuan Wang, and Yunhe Cao

SYSTEMS ENGINEERING

- 800 Adaptive subsequence adjustment with evolutionary asymmetric path-relinking for TDRSS scheduling**
Peng Lin, Linling Kuang, Xiang Chen, Jian Yan, Jianhua Lu, and Xiaojuan Wang
- 811 Improved algorithms to plan missions for agile earth observation satellites**
Huicheng Hao, Jiang Wei, and Yijun Li
- 822 Method for electromagnetic detection satellites scheduling based on genetic algorithm with alterable penalty coefficient**
Jun Li, Hao Chen, Zhinong Zhong, Ning Jing, and Jiangjiang Wu
- 833 Expansion modelling of discrete grey model based on multi-factor information aggregation**
Naiming Xie, Chaoyu Zhu, and Jing Zheng
- 840 Comprehensive multivariate grey incidence degree based on principal component analysis**
Ke Zhan, Yintao Zhang, and Pinpin Qu

CONTROL THEORY AND APPLICATION

- 848 High-order sliding mode attitude controller design for reentry flight**
Liang Wang, Yongzhi Sheng, and Xiangdong Liu
- 859 Finite-time coordination control for formation flying spacecraft**
Yong Guo, Shenmin Song, and Liwei Deng
- 868 Extended optimal guidance law with impact angle and acceleration constraints**
Ran Li, Qunli Xia, and Qiuqiu Wen
- 877 Fault reconstruction observer design for continuous-time systems with measurement disturbances via descriptor system approach**
Qingxian Jia, Yingchun Zhang, Chengliang Li, and Xueqin Chen

SOFTWARE ALGORITHM AND SIMULATION

- 886 Interactive multigraph visualization and exploration with a two-phase strategy**
Huaquan Hu, Lingda Wu, Chao Yang, and Hanchen Song
- 895 Fast cross validation for regularized extreme learning machine**
Yongping Zhao and Kangkang Wang

RELIABILITY

- 901 Stochastic framework for reliability enhancement using optimal feeder reconfiguration**
Abdollah Kavousi-Fard, Taher Niknam, Mohammad-Reza Akbari-Zadeh, and Bahram Dehghan
