Original Articles

- Assessment of creep constitutive properties from three-point bending creep test with miniaturized specimens 482
F-K Zhuang, S-T Tu, G-Y Zhou and Q-Q Wang
- Validating numerically predicted make-up of threaded connections using digital image correlation and infrared monitoring 492
T Galle, JD Pauw, WD Waele, JV Wittenberghe and PD Baets
- Shock failure analysis of metallic structures by using strain energy density method 501
M Çelik, Ü Mercimek and S Kadioğlu
- Finite element method implementation of a nonlocal viscoplastic model with consideration of temperature dependence 510
J Mao and J Shen
- Investigation of the effects of thermal gradients present in Gleeble high-temperature tensile tests on the strain state for free cutting steel 521
E Kardoulaki, J Lin, D Balint and D Farrugia
- Limit load solutions of plates with extended surface cracks under combined biaxial forces and cross-thickness bending 533
Y Lei and P Budden
- Identification of material parameters from low cycle fatigue, thermomechanical fatigue and creep tests for damage prediction of thermomechanically loaded Ni-resist Type D-5S 547
D Šeruga, A Gosar, F Längler and M Nagode
