

Contents

Original Articles

- Application of high-speed video extensometry for high-temperature tensile characterization of boron heat-treated steels 378
F Jenner, ME Walter, RM Iyengar and RL Hughes
- Estimating quench residual stresses in cylindrical steels bars: Excluding the effects of phase transformation 388
WT Yuen and DJ Smith
- Optical strain gauge with high spatial resolution 404
L Rodriguez-Cobo, A Cobo and J-M Lopez-Higuera
- Process modelling and optimization of keyhole plasma arc welding of thin Ti-6Al-4V 410
W Sun, MB Mohammed, L Xu, TH Hyde, DG McCartney and SB Leen
- A constitutive model for inelastic behavior of casting materials under thermo-mechanical loading 421
F Längler, K Naumenko, H Altenbach and M levdokymov
- Optimisation of material properties for the modelling of large deformation manufacturing processes using a finite element model of the Gleeble compression test 429
CJ Bennett and W Sun
- An electromagnetic testing machine for determining fracture toughness under different loading rate and superimposed pressure 437
CMA Silva, PAR Rosa, AG Atkins and PAF Martins
- A direct approach for modelling ion-exchange residual stress distribution in glass 445
L Ma and K Sun

Review Articles

- On the history of torsional stress concentrations in shafts: From electrical analogies to numerical methods 452
A Ajovalasit, V Nigrelli, G Pitarresi and GV Mariotti
- Characterization of electrolytic tinplate materials via combined finite element and regression models 467
M Illera, R Lostado, RF Martinez and BJ MacDonald
