

## Special Issue on: Ventilation 2015

Guest Editors: Wei Ye, Jun Gao, Xu Zhang and Chuck Wah Yu

This is a collection of papers selected from "Ventilation 2015", the 11th International Conference on Industrial Ventilation, held on 26-28 October 2015 in Shanghai, organized by Tongji University, VTT (Technical Research Centre of Finland) and Tsinghua University.

### Editorial

- 147 **Studies of relationship between ventilation, pollution exposure and environmental health of buildings**

W. Ye, J. Gao, X. Zhang and C. W. Yu

### Original Papers

- 152 **Potential of an air curtain system orientated to create non-uniform indoor thermal environment and save energy**

C. Shen, X. Shao and X. Li

- 166 **A practical method and its applications to prioritize volatile organic compounds emitted from building materials based on ventilation rate requirements and ozone-initiated reactions**

W. Ye, D. Won and X. Zhang

- 185 **Computational fluid dynamics study of human-induced wake and particle dispersion in indoor environment**

Y. Tao, K. Inthavong and J. Tu

- 199 **A unified method to compute limits of acceptability for thermal comfort and indoor air quality at the workplace**

D. Freda, P. Capone, M. del Gaudio and P. Lenzuni

- 208 **New concepts for the ventilation of shopping centers: Reducing air change rate, applying active chilled beams and elevating cold water supply temperature**

P. Mathis, H. Freitag, D. Hegemann, M. Schmidt and D. Müller

- 226 **Ventilation improvement for reducing individual exposure to cooking-generated particles in Chinese residential kitchen**

C. Cao, J. Gao, L. Wu, X. Ding and X. Zhang

- 238 **Performance comparison of conventional and local computer room air-conditioning systems in data centres by CFD analysis**

J. Takeuchi, T. Kurabuchi, H. Yoshino and S. Lee

- 248 **Ventilation strategy for random pollutant releasing from rubber vulcanization process**

C. Cao, J. Gao, Y. Hou and J. Chen

- 256 **The effect of free cooling and demand-based ventilation on energy consumption of self-regulating and traditional chilled beam systems in cold climate**

R. Kosonen and J. Penttinen

- 272 **Parametrization of the fire-smoke exhaust system for a large and high-rise atrium in Shanghai through salt-bath experiment**

J. Wang, J. Gui, J. Gao and X. Hu
