

# Building Services Engineering Research & Technology

Volume 35, Number 6, 2014

## Contents

### Articles

- Monthly averaged-hourly solar diffuse radiation model for the UK  
*T Muneer, S Eixebarria and EJ Gago* 573
- A control-oriented semi-physical model for a direct expansion air conditioning system  
*X Xiangguo, D Shiming, H Xiaohong and Z Xuejun* 585
- The presence and growth of *Legionella* species in thermostatic shower mixer taps: an exploratory field study  
*J van Hoof, LM Hornstra, E van der Blom, OWW Nuijten and PWJJ van der Wielen* 600
- Installation of roof-top solar PV modules and their impact on building cooling load  
*Y Kotak, EJ Gago, P Mohanty and T Muneer* 613
- Heating plant input-output efficiency in two cold-climate institutional buildings with condensing hot water boilers  
*MJ Gestwick, A Kandil and JA Love* 634
- Fault tolerant control strategies for a high-rise building hot water heating system  
*L Lianzhong and M Zaheeruddin* 653
- Application of variable-speed ground-source heat pumps to displacement ventilation systems for use in sub-tropical regions  
*CK Lee and HN Lam* 671

### Technical Note

- Simulation of pollution transport in buildings: the importance of taking into account dynamic thermal effects  
*J Taylor, C Shrubsole, P Biddulph, B Jones, P Das and M Davies* 682
