

Building Services Engineering Research & Technology

Contents

Articles

- Development of a model for single-sided, wind-driven natural ventilation in buildings
J Zhou, C Ye, Y Hu, H Hemida, G Zhang and W Yang 381
- Energy efficiency evaluation for the water supply systems in tall buildings
LT Wong, KW Mui and Y Zhou 400
- A new route to exposed thermal mass: Sound-absorbing poured concrete
S Lombardo, JJ Orr, DA Coley and MJ Wood 408
- A study for improving the energy efficiency of lifts with adjustable counterweighting
T Tukia, S Uimonen, M-L Siikonen, H Hakala and M Lehtonen 421
- On the total power factor of lift systems
A So, WL Chan and SKM Tsang 436
- An exploration of load-shifting potential in real in-situ heat-pump/gas-boiler hybrid systems
A Stafford 450
- A rapid tool for emission outlet concentration simulation of scrubber and make-up air unit at different inlet concentrations
C-W Kuo, T-S Chuang and L-M Chang 461

Technical Notes

- Effect of wetting time in the sorption and in the thermal conductivity of the most commonly used structural materials
F Szodrai and Á Lakatos 475
- An analysis of technical facilities failures in modern Spanish houses
MJ Carretero-Ayuso, A Moreno-Cansado and J García-Sanz-Calcedo 490
