

# Building Services Engineering Research & Technology

## Contents

### Articles

- Performance impact of indoor environmental policy implementation for airside systems in Hong Kong Grade A offices  
*LT Wong, KW Mui, CT Cheung, EWM Lee and MC Lee* 525
- Performance investigation of liquid-to-air membrane energy exchanger under low solution/air heat capacity rates ratio conditions  
*M Kassai and CJ Simonson* 535
- Establishing the upper performance limit of destination elevator group control using idealised optimal benchmarks  
*L Al-Sharif, J Hamdan, M Hussein, Z Jaber, M Malak, A Riyal, M AlShawabkeh and D Tuffaha* 546
- Traffic analysis of a simplified two-dimensional elevator system  
*A So, L Al-Sharif and A Hammoudeh* 567
- The thermal output evaluation of radiant heating panels by experiment  
*DU Shin, MS Shin, KN Rhee, SR Ryu, CH Jeong, MS Yeo and KW Kim* 580
- An experimental study of heat pipe heat exchanger for cooling and dehumidification in an indirect evaporative way  
*M-y Chan and RT-h Ng* 596
- Quantifying the domestic building fabric 'performance gap'  
*D Johnston, D Miles-Shenton and D Farmer* 614
- A case study to examine the imputation of missing data to improve clustering analysis of building electrical demand  
*D Inman, R Elmore and B Bush* 628
