Atomic and Molecular Physics

- Generation of high-order harmonic continuum with two-hump-structure infrared laser pulse
Candong Liu, Pengfei Wei, Jing Miao, Chunmei Zhang, Yansui Huang, Yinghui Zheng, Yuxin Leng, and Zhinan Zeng 030201

Diffraction and Gratings

- Dark blue Čerenkov second harmonic generation in the two-layer-stacked hexagonal periodically poled MgO: LiNbO₃s
Chuanlong Ma, Yufei Wang, Lei Liu, Xuedong Fan, Aiyi Qi, Zhigang Feng, Feng Yang, Qinjun Peng, Zuyan Xu, and Wanhua Zheng 030501

Fiber Optics and Optical Communications

- Design and optimization of weakly-coupled few-mode fiber with low nonlinearity
Junyan Liu, Jie Zhang, Jiawei Han, Guanjun Gao, Yongli Zhao, and Wanyi Gu 030601
- Simultaneous format conversion of parallel multichannel based on FWM in symmetric highly nonlinear fiber loop
Yueying Zhan, Min Zhang, Zhuo Liu, and Xue Chen 030602

Holography

- Wavelength combining with volume Bragg gratings in photo-thermo-refractive glasses
Xiang Zhang, Fan Gao, Jiansheng Feng, Kuaisheng Zou, Baoxing Xiong, and Xiao Yuan 030901
- Computer-generated-hologram-accelerated computing method based on mixed programming
Yaping Zhang, Peng Wang, Hong Chen, Yinhua Xu, Wei Chen, and Wei Xu 030902

Imaging Systems

- Accordion lattice based on the Talbot effect
S. Deachapunya and S. Srisuphaphon 031101

Instrumentation, Measurement, and Metrology

- Compact static infrared broadband snapshot imaging spectrometer
Qinghua Yang 031201
- A three-spectrum method for accurate calibration of bi-plate zero-order retarder
Zhigang Han, Zhi Xu, and Lei Chen 031202

Lasers and Laser Optics

- Dissipative soliton operation in diode pumped ultrafast Yb:GdYSiO₅ oscillator
Wenlong Tian, Jiangfeng Zhu, Zhaohua Wang, Junli Wang, and Zhiyi Wei 031401

Contents continued

- Generation of high power laser at 1314 nm from a diode-side-pumped Nd:YLF module
031402
Shande Liu, Lulu Dong, Baitao Zhang, Jingliang He, Zhaowei Wang, Jian Ning, Ruihua Wang, and Xunmin Liu
- Q-switched ytterbium doped fiber laser using multi-walled carbon nanotubes saturable absorber
031403
N. Kasim, A. H. H. Al-Masoodi, F. Ahmad, Y. Munajat, H. Ahmad, and S. W. Harun
- High power diode-side-pumped 1 112-nm Nd:YAG laser based on master-oscillator power-amplifier system
031404
Biaolong Liu, Zhichao Wang, Feng Yang, Zhimin Wang, Yong Bo, Hongtao Yuan, Lei Yuan, Baoshan Wang, Jialin Xu, Yading Guo, Qinjun Peng, Jingyuan Zhang, Dafu Cui, and Zuyan Xu
- Pulse dynamics controlled by saturable absorber in a dispersion-managed normal dispersion Tm-doped mode-locked fiber laser
031405
Xiaoliang Yang, Yu Chen, Chujun Zhao, and Han Zhang
- Materials**
- Adjustable surface plasmon resonance with Au, Ag, and Ag@Au core-shell nanoparticles
031601
S. M. Hamidi and M. A. Oskuei
- Medical Optics and Biotechnology**
- Influence of laser power density on damage of comb by photodynamic therapy—simulation and validation of mathematical models
031701
Naiyan Huang, Zhongshun Ma, Ying Wang, Jing Zeng, Haixia Qiu, Xiaoying Tang, and Ying Gu
- Image reconstruction method for laminar optical tomography with only a single Monte-Carlo simulation
031702
Mengyu Jia, Shanshan Cui, Xueying Chen, Ming Liu, Xiaoqing Zhou, Huijuan Zhao, and Feng Gao
- Nonlinear Optics**
- Cascaded four-wave mixing generation with pumping in the normal dispersion regime
031901
Ying Li, Jing Hou, Zongfu Jiang, and Liangjin Huang
- Optimization of quadrature frequency conversion with type-II KDP for second harmonic generation of the nanosecond chirp pulse at 1053 nm
031902
Lailin Ji, Baoqiang Zhu, Chong Liu, Tao Wang, and Zunqi Lin
- Optical Devices**
- LED-based spectrally tunable light source with optimized fitting
032301
Kun Yuan, Huimin Yan, and Shangzhong Jin
- Corrigendum**
- V-doped MgAl₆O₁₀: novel luminescence substrate for phosphor-free UV-white LEDs-CORRIGENDUM
033501
Peng Xu, Changtai Xia, Feng Wu, Xing Li, Qinglin Sai, Guoqing Zhou, and Xiaodong Xu
