Atomic and Molecular Physics

- Maximized cooling efficiency for a Zeeman slower operating at optimized magnetic field profile
Zhuanxian Xiong, Yun Long, Huixing Xiao, Xi Zhang, Lingxiang He, and Baolong Lü 010201
- Above-threshold detachment of negative ions by circularly polarized few-cycle laser fields
Lihua Bai, Yuheng Liu, Tingting Cui, Yan Wang, Dongmei Deng, and Huifang Zhang 010202
- Photoelectron angular distributions from two-photon ionization of atoms near ionization threshold
Lihua Bai, Tingting Cui, Yuheng Liu, Yan Wang, Dongmei Deng, and Jihui Tao 010203
- Spectral fine structure of the atomic ground states based on full relativistic theory
Zhenghe Zhu and Yongjian Tang 010204

Detectors

- Transmission-mode GaN photocathode based on graded $\text{Al}_x\text{Ga}_{1-x}\text{N}$ buffer layer
Xiaoqing Du, Benkang Chang, Yunsheng Qian, and Pin Gao 010401
- Determination of breakdown voltage of $\text{In}_{0.53}\text{Ga}_{0.47}\text{As}/\text{InP}$ single photon avalanche diodes
Peng Zhou, Changjun Liao, Zhengjun Wei, Chunfei Li, and Shuqiong Yuan 010402

Fiber Optics and Optical Communications

- Characteristics of light polarization in magneto-optic fiber Bragg gratings with linear birefringence
Baojian Wu, Chongzhen Li, Kun Qiu, and Liwei Cheng 010601
- A novel scheme to generate 40-GHz CSRZ pulse trains using a 10-GHz dual-parallel Mach-Zehnder modulator
Yanfei Xing and Caiyun Lou 010602
- All-optical sampling OFDM system performance analysis
Hang Ye, Hongwei Chen, Chao Tang, Minghua Chen, and Shizhong Xie 010603

Image Processing

- Point pattern matching based on kernel partial least squares
Weidong Yan, Zheng Tian, Lulu Pan, and Jinhuan Wen 011001
- Combining clustering and classification for remote-sensing images using unlabeled data
Xiaoyong Bian, Tianxu Zhang, and Xiaolong Zhang 011002
- Combined multi-kernel support vector machine and wavelet analysis for hyperspectral remote sensing image classification
Kun Tan and Peijun Du 011003

Contents continued

Image Systems

- Objective evaluation of target detectability in night vision color fusion images *Yihui Yuan, Junju Zhang, Benkang Chang, Hui Xu, and Yiyong Han* 011101

Instrumentation, Measurement, and Metrology

- Angle-deviation optical profilometer *Chen-Tai Tan, Yuan-Sheng Chan, Zhen-Chin Lin, and Ming-Hung Chiu* 011201

Integrated Optics

- A concave photonic crystal waveguide with a corrugated surface for high-quality focusing *Hong Wu, Liyong Jiang, Haipeng Li, Wei Jia, Gaige Zheng, Haixia Qiang, and Xiangyin Li* 011301

Lasers and Laser Optics

- Computational fluid dynamic modeling of gas flow characteristics of the high-power CW CO₂ laser *Hongyan Huang and Youqing Wang* 011401
- Production of annular flat-topped vortex beams *Jiannong Chen, Yongjiang Yu, and Feifei Wang* 011402

Materials

- First-principles investigations of electronic structures and optical properties in wurtzite Zn₁₆O₁₃N₂F and Zn₁₄O₁₅Ag₂F *Jing Wen, Chunying Zuo, and Cheng Zhong* 011601
- Temperature dependence of photoluminescence property in BaIn₂O₄ *Huiyong Deng, Qiwei Wang, Ping Ren, Jie Wu, Junchao Tao, Xin Chen, and Ning Dai* 011602

Nonlinear Optics

- Plasma effect on the phase matching of high harmonic generation *Hui Lu, Candong Liu, Shitong Zhao, and Peng Liu* 011901

Optical Devices

- Design and analysis of a novel tunable optical power splitter *Xiongguo Tang, Jinkun Liao, Heping Li, Lin Zhang, Rongguo Lu, and Yongzhi Liu* 012301

Remote Sensing and Sensors

- Application of phase retrieval algorithm in reflective tomography laser radar imaging *Xiaofeng Jin, Jianfeng Sun, Yi Yan, Yu Zhou, and Liren Liu* 012801

Thin Films

- A novel optical multilayer hydrophone with a triangular pyramid substrate *Suyong Wu, Xingwu Long, Kaiyong Yang, and Yun Huang* 013101
- Comparison of laser-induced damage in Ta₂O₅ and Nb₂O₅ single-layer films and high reflectors *Cheng Xu, Yulong Zhao, Yinghuai Qiang, Yabo Zhu, Litong Guo, and Jianda Shao* 013102
