

Application of Phased Array Technology for Identification of Low Frequency Noise Sources

Journal of
LOW FREQUENCY
NOISE, VIBRATION
AND ACTIVE CONTROL

Received 17 February 2009

CONTENTS	PAGE
Application of Phased Array Technology for Identification of Low Frequency Noise Sources Hugo E. Camargo, Patricio A. Ravetta, Ricardo A. Burdisso and Adam K. Smith	237
Vibratory Sensation Induced by Low-Frequency Noise: A Pilot Study on the Threshold Level Yukio Takahashi	245
Probabilistic Assessment of Human Response to Footbridge Vibration Stana Živanović and Aleksandar Pavic	255*
Parameters Identification for Interior Permanent Magnet Synchronous Motor Driven by Sensorless Control Manabu Kosaka and Hiroshi Uda	269
RESEARCH NOTE	
Evaluation of Exposure to Whole-Body Vibration and its Health Effects on Train Operators in Tehran-Andimeshk line, Iran P. Nassiri, A.R. Koohpaei, H. Zeraati	285
Abstracts	295

1. INTRODUCTION

Over the last few decades, the amount of energy consumed in the United States of America. During the last decade, some projections estimate a demand for 45-50% to 11.5TWh of energy
