NATURE'S MISSION, 1869

The objective which it is proposed to attain by this periodical may be broadly stated as follows. It is intended, first, to place before the general public the grand results of scientific work and scientific discovery; and to urge the claims of science to move to a more general recognition in education and in daily life... Secondly, to aid scientific men [sic] themselves, by giving early information of all advances made in any branch of natural knowledge throughout the world, and by affording them an opportunity of discussing the various scientific questions which arise from time to time.

Nature's mission statement was updated in 2000:

TRAINING VIDEO

New on the Nature Video Channel, a feature on a test of the efficacy of 'brain training'. Does it work? It depends what you mean by 'work'.

www.youtube.com/NatureVideoChannel

On the podcast, the regular features plus more on the disappointing outcome of the Copenhagen climate change conference, concerns about the effects of linking the Red Sea to the Dead Sea, and astronomers determine the atmospheric composition of an exoplanet.
