

Research Papers

Numerical solution of a scalar one-dimensional monotonicity-preserving nonlocal nonlinear conservation law Qiang DU, Zhan HUANG (1)

The Haar wavelet analysis of matrices and its applications Xiquan SHI (19)

A unified approach to construct a class of Daubechies orthogonal scaling functions Tianxiao HE, Tung NGUYEN (29)

The minimal measurement number problem in phase retrieval: a review of recent developments Zhiqiang XU (40)

A unified ternary curve subdivision scheme Qianqian LÜ, Jieqing TAN, Jun SHI (47)

Identification of planar sextic Pythagorean-hodograph curves Hui WANG, Chungang ZHU, Caiyun LI (59)

Reconstruction of the linear ordinary differential system based on discrete points Chongjun LI, Linlin XIE, Haidong LI (73)

Application of polynomial interpolation in the Chinese Remainder problem Tianxiao HE, Scott MACDONALD, Peter J.-S. SHIUE (90)

A cost-efficient variant of the incremental Newton iteration for the matrix p th root Fuminori TATSUOKA, Tomohiro SOGABE, Yuto MIYATAKE, Shaoliang ZHANG (97)

Energy-preserving H^1 -Galerkin schemes for the Hunter–Saxton equation Yuto MIYATAKE, Geonsik EOM, Tomohiro SOGABE, Shaoliang ZHANG (107)

Mass transport based multi-model color transfer Yantao LIU, Shengjing TIAN, Meng LIU, Xiuping LIU (119)
