3 QUESTIONS

Former U.S. surgeon general Vivek Murthy on why emotions matter

VISIONS

EXPLORE

Health: lip prints, robotic arms, artificial wombs, the most studied foods

A TINY COUNTRY FEEDS THE WORLD

The Netherlands has become an agricultural giant, producing abundant crops using reduced resources - and pioneering new ways to fight hunger. By Frank Viviano Photographs by Luca Locatelli

On the Cover In this drawing of a brain, the burst of light looks like how a surge of dopamine might feel. A chemical neurotransmitter that carries signals across synapses, dopamine plays a key role in addiction by boosting desire for the addictive substance or behavior. Illustration by Daniel Hertzberg

NAT GEO WILD

WALK ON CHINA'S WILD SIDE

Very different wildlife ecosystems exist in two regions of China. The high-altitude Tibet Autonomous Region is populated by animals that can tolerate thin air, like the wild yak. The Yunnan region is a subtropical paradise, home to the only elephants in the nation, including this baby Asian elephant in Xishuangbann Wild Elephant Valley (right Explore both regions in the two-part series China: Wild Side, airing September 1 and September 8 at 9/8c on Nat Geo WILD,

TELEVISION
