Computers & Chemical Engineering

Contents

H. Patel, F. Ein-Mozaffari and R. Dhib 421 CFD analysis of mixing in thermal polymerization of styrene
J.S. Jayakumar, S.M. Mahajan, J.C. Mandal, K.N. Iyer and P.K. Vijayan 430 CFD analysis of single-phase flows inside helically coiled tubes
M. Ballerstein, D. Michaels, A. Seidel-Morgenstern and R. Weismantel 447 A theoretical study of continuous counter-current chromatography for adsorption isotherms with inflection points
N. Ramzan, M. Faheem, R. Gani and W. Witt 460 Multiple steady states detection in a packed-bed reactive distillation column using bifurcation analysis
J.J. Stickel 457 Data smoothing and numerical differentiation by a regularization method
H.M. Jena, G.K. Roy and S.S. Mahapatra 476 Determination of optimum gas holdup conditions in a three-phase fluidized bed by genetic algorithm
S.-J. Park, S. Bhargava and G.G. Chase 485 Fitting of kinetic parameters of NO reduction by CO in fibrous media using a genetic algorithm
S.A. Martínez-Delgado, H.R. Mollinedo P., M.A. Gutiérrez, I.D. Barceló and J.M. Méndez 491 Performance of a tubular electrochemical reactor, operated with different inlets, to remove Cr(VI) from wastewater

ELSEVIER

ISSN 0098-1354
On-line multivariate statistical monitoring of batch processes using Gaussian mixture model

Repetitive control and online optimization of Catofin propane process

An effective hybrid particle swarm optimization for batch scheduling of polypropylene processes

Tank cycling and scheduling analysis of high fusion point oil transportation for crude oil operations in refinery

Cyclic scheduling for best profitability of industrial cracking furnace system

Multiobjective scheduling for semiconductor manufacturing plants

Probabilistic modeling and dynamic optimization for performance improvement and risk management of plant-wide operation
