Research Papers

Experimental measurement of flow past cavities of different shapes	505
C. Ozalp, A. Pinarbasi and B. Sahin	
Influence of probe sampling on reacting species measurement in diluted combustion	516
D. Lupant, B. Pesenti and P. Lybaert	
The effect of additives on the speed of the crystallization front of xylitol with various degrees of supercooling.	523
A. Seppälä, A. Meriläinen, L. Wikström and P. Kauranen	
The effect of corona discharge on free convection heat transfer from a horizontal cylinder	528
S.R. Mahmoudi, K. Adamiak, P. Castle and M. Ashjace	
Air flow aerodynamic on a wall-mounted hemisphere for various turbulent boundary layers.	538
M.M. Tavakol, M. Yaghoubi and M. Masoudi Motlagh	
Thermal performance of a carbon fiber composite material heat sink in an FC-72 thermosyphon.	554
V. Gandikota, G.F. Jones and A.S. Fleischer	
Inverse thermal analysis of the drying zone of the evaporator of an axially grooved heat pipe	562
Z. Lataoui, C. Romestant, Y. Bertin, A. Jemni and D. Petit	
Thermal and friction characteristics of turbulent flow through rectangular and square ducts with transverse ribs and wire-coil inserts.	575
S.K. Saha	
Influence of a rectangular baffle on the downstream flow structure.	590
S.T. Gajusingh, N. Shaikh and K. Siddiqui	
Experimental heat and mass transfer of the separated and coupled rotating desiccant wheel and heat wheel	603
N. Enteria, H. Yoshino, A. Satake, A. Mochida, R. Takaki, R. Yoshie, T. Mitamura and S. Baba	
Comparison of the effects of measured and computed thermophysical properties of nanofluids on heat transfer performance	616
W. Duangthongsuk and S. Wongwises	
The rivulet flow pattern during oil-water horizontal flow through a 12 mm pipe	625
B. De, T.K. Mandal and G. Das	
A note on unsteady impinging jet heat transfer	633
S. Bhattacharya and A. Ahmed	
Comparison of turbulence length scales assessed with three measurement systems in increasingly complex turbulent flows.	638
A. Thacker, S. Loyer and S. Aubrun	
Validation of a FBC model for co-firing of hazelnut shell with lignite against experimental data	646
G. Kulah
